Certified Installer E-News August 11, 2008 - 3rd Edition

Welcome to the third edition of the Vinyl Siding Institute's (VSI) Certified Installer E-News. As VSI celebrates our third year of certifying qualified vinyl siding installers who demonstrate their knowledge of proper vinyl siding application techniques, we're pleased to provide this update and remind you to recertify, if your certification is slated to expire in 2008.

New Online Resource VSI is pleased to introduce a special section of its website just for Certified Installers! With answers to questions on the benefits of vinyl siding, course materials and forms, vinyl siding promotional resources, recertification details, updated installation techniques, and other helpful information, the site is designed for VSI Certified Installers whose certification is current. Be sure to visit [Resources to Help Certified Installers](#) today and come back often to check what else we've added to help you retain the professional certification status that makes you stand out above the competition.

Be Among the First to Recertify If you received your VSI certification in 2005, it's time to recertify! Renewing your certification is easy – click here [Do you know how to recertify after three years?](#) and follow the instructions. ATI will send you a test, which you must pass to recertify, but you can take it with the updated VSI *Vinyl Siding Installation Manual*. The recertification fee is \$165. In the next few weeks VSI will send the first 1,000 Certified Installers our updated manual, but anyone can download this important resource at [VSI Vinyl Siding Installation Manual](#). And if you have questions about your certification status, please contact Karen Yetter at ATI, (717) 764-7700 or email kyetter@archtest.com.

Go Green With Vinyl Siding Green building is growing, even as the housing market remains slow. The good news is, siding with vinyl is one of the easiest ways to go green. Vinyl siding has the potential to contribute to achieving more points than other exterior cladding in the leading green building certification programs. Visit [*Siding with the Environment*](#) for more information.
